our focus

Science Driven

Therapeutically Focused

Full Scope Clinical Research Services

ProSciento is a global clinical research organization, exclusively focused on drug and device development programs for diabetes, obesity, MASLD/MASH, and related metabolic diseases.

OUR services

Building on two decades of experience and more than 375 completed metabolic clinical trials, ProSciento provides customized clinical research services for multinational clinical studies. Our scalable R&D service model incorporates therapeutic expertise, advanced methodologies, patient access strategies, and global operational excellence to provide our clients an unique advantage in today's rapidly evolving landscape of metabolic drug and device development.

Clinical & Regulatory Strategy + Full Scope CRO Services + State-of-the-Art Clinical Facility + Global Scientific Network

Specialized consulting services for clinical development, regulatory strategy and licensing

Full scope, comprehensive multi-site services to support metabolic clinical research programs

State-of-the-art clinical research facility for metabolic drug and device clinical trials

Global network of partners connecting our clients to the most relevant research methods

connecting

clients, partners and patients to develop new treatments for diabetes, obesity, MASLD/MASH, and related metabolic diseases.

Global Network of Clinical Trial Sites with Metabolic Expertise

We have a network of clinical trial sites and advanced method hubs broadly positioned across North America, Europe and Australia and a growing number in South America and Asia. All clinical sites have strong metabolic expertise, access to the relevant patient populations, and verified enrollment capabilities.

Unparalleled Experience in Metabolic Clinical Research

375+ metabolic
clinical trials conducted

Contributions to 20 drugs
& devices on the market today

Specialized Clinical Research Methodologies

We utilize our therapeutic expertise and experience towards identifying today's most innovative biomarkers and methodologies for metabolic clinical research.

- Proprietary PRO PASS® patient access and screening
- Automated glucose clamp procedures
- Stable isotope tracer techniques
- Advanced imaging biomarkers
- Circulating and functional biomarkers
- Tissue biopsies
- Mixed-meal tolerance, glucose, & lipid tests
- Nutrition management & diabetic counseling
